

Supplying the Structural Moving industry since 1958
Modern Hydraulics/Nevada LLC

OUR PRODUCT LINE FOR 2011

We are Modern Hydraulics/Nevada LLC, and we design and build crib jacks, power packs, and Unified™ Jacking Systems for the structural moving industry.

Our crib jacks come in multiple sizes and have advanced features such as a self-retracting spring, a removable bottom plug to ease servicing, are made of heat treated material to for an extended life, have an advanced surface treatment on the interior and exterior of the jack that is superior to chrome plating and paint at preventing rust and corrosion, and have a base design with easy to carry handles.

Our power packs have a **modern** design that makes them easy to move around a jobsite, come in single and double-acting models, can be equipped to operate as two or more independent units on one tank, are rated at 6000 or 10,000 PSI operating pressure, and come in various tank sizes and pump outputs.

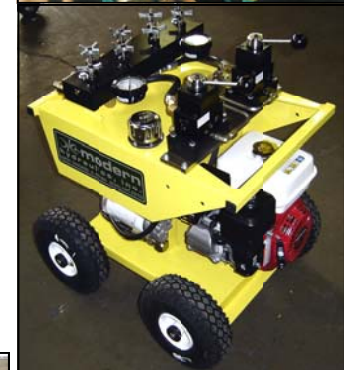

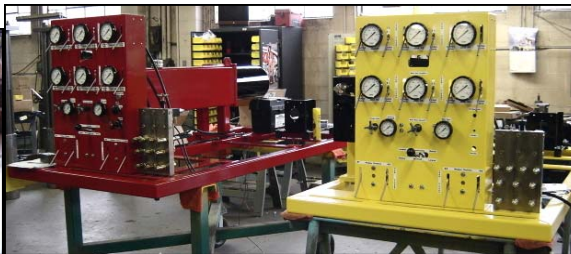

Our Unified™ (synchronized) Jacking Systems are the best available and have over 52 years of experience behind them. You can order them with ball or needle-type control valves, electronic remote controls, zone valves for flexible operation with large capacity jacks, mirror-image gauge panels to allow side-by-side operation of two machines, custom panel layouts and frame sizes, multiple outlet manifold locations and layouts, and multiple and selectable pump volume outputs powered by Honda gas or John Deere diesel engines.

We can design and build Unified™ Jacking Systems in any size from 2 to 120 jacks, 6000 to 10,000 PSI operating pressure, to operate any size jack(s).

In 2009 we introduced electronic remote controls on our unified machines, and an inexpensive, compact 4-jack unified machine, and in 2010 a new modular, expandable unified jacking machine design that's available in all sizes.

We look forward to earning your business.

Lance Renshaw, President
