

The location: The new Orange Bowl Stadium, Miami, Florida
The mission: Move four 2-million pound trusses for the movable roof 8' horizontally and 4" vertically from the construction stands to the permanent supports on the outside of the stadium walls

Research by L.P.R. Construction of Loveland, Colorado led them to conclude that only one company in North America could provide the unified jacking system for this project. Modern Hydraulics designed and built a special long-stroke four jack unified jacking system and supplied four SPX/Power Team 100 ton double-acting jacks, delivered the machine to the job site and instructed L.P.R. personnel in the operation of the machine. So successful was this operation that it was completed in half the allocated time.

When you require the very best in quality and reliability in a Unified™ Hydraulic Jacking System there is only one company to contact.

Modern Hydraulics/Nevada LLC
